### Key Personnel

<b>Title:</b>	Protocol for Surveillance of Hospital onset COVID-19 cases
<b>Author:</b>	<a href="#">ARHAI Scotland</a>
<b>Approver:</b>	Shona Cairns
<b>Owner:</b>	Shona Cairns

### Version History

Version	Date	Summary of changes	Changes marked
V1.0	Jan 2022	Final draft	-
V1.1	November 2022	Updated Version	
V.1.2	January 2022	Updated introduction to align with NIPCM	

### Distribution

Name	Division	Version
Publication on PHS Website alongside <a href="#">Hospital onset COVID-19 cases in Scotland</a> report		V1.0
Publication on PHS Website alongside <a href="#">Hospital onset COVID-19 cases in Scotland</a> report		V1.1
Publication on PHS Website alongside <a href="#">Hospital onset COVID-19 cases in Scotland</a> report		V1.2

### Approvals

Version	Date Approved	Name	Division
V1.0		Laura Imrie	ARHAI Scotland, NHS NSS
V1.1	09/11/2022	Shona Cairns	ARHAI Scotland, NHS NSS
V.1.2	11/01/2023	Shona Cairns	ARHAI Scotland, NHS NSS

## Introduction

Antimicrobial Resistance and Healthcare Associated Infection (ARHAI) Scotland, part of National Services Scotland, works closely with Public Health Scotland to deliver the COVID-19 response.

A system for monitoring COVID-19 is critical to tracking hospital transmission and will inform infection prevention and control measures. The published data can be used to improve care of patients. SARS-CoV-2 is primarily transmitted from person to person via respiratory particles. Further information on SARS-CoV-2 and current IPC guidance can be found in the [National Infection Prevention and Control Manual](#).

This protocol outlines the processes in place to extract, validate and analyse COVID-19 cases by hospital onset COVID-19 status.

## Aims

ARHAI Scotland aims to capture all instances of COVID-19 where cases first test positive as a hospital in-patient. Surveillance data are essential for monitoring trends and assisting in outbreak investigations and to understand the extent of ongoing transmission within the hospital setting. ARHAI Scotland offers support to NHS boards across Scotland to aid their local COVID-19 prevention strategies.

## Case Definitions

### Definition of a COVID-19 Case

A COVID-19 case is defined as an individual who has tested positive for COVID-19 by SARS-CoV-2 RT-PCR (PCR), or, from 5th January 2022 onwards by PCR, Lateral Flow Device (LFD) or other point of care rapid test. LFD positive cases that are followed by a negative PCR result within 48 hours are excluded. Cases include first positive tests recorded for an individual since March 2020, and possible reinfections defined as individuals who test positive 90 days or more after their last positive test. The case list is sourced from Corporate Data Warehouse (CDW), where episodes correspond to reported COVID-19 cases released by [Public Health Scotland](#) (PHS).

## Definition of Hospital Onset COVID-19

All COVID-19 cases can be broken down into five Hospital Onset categories, firstly by determining if the case was a hospital in-patient at the time of their first positive specimen, and if so, how many days after admission was the test taken.

The agreed hospital onset case definition for the UK is based on the number of days since admission to an NHS health board to the date of specimen sampling for a positive COVID-19 test.

Time since admission to specimen sampling is categorised as:

- community onset (first positive specimen taken in the community)
- non-hospital onset (first positive specimen on day 1 or 2 of admission to NHS board)
- indeterminate hospital onset (first positive specimen on days 3 to 7 of admission to NHS board)
- probable hospital onset (first positive specimen on days 8 to 14 of admission to NHS board)
- definite hospital onset (first positive specimen date was 15 or more days after admission to NHS board)

Day of sampling post admission	Nosocomial categorisation
Before admission	Community onset COVID-19
Day 1 of admission/on <b>admission to NHS board</b>	Non-hospital onset COVID-19
Day 2 of admission	Non-hospital onset COVID-19
Day 3 of admission	Indeterminate hospital onset COVID-19
Day 4 of admission	Indeterminate hospital onset COVID-19
Day 5 of admission	Indeterminate hospital onset COVID-19
Day 6 of admission	Indeterminate hospital onset COVID-19
Day 7 of admission	Indeterminate hospital onset COVID-19
Day 8 of admission	Probable hospital onset COVID-19
Day 9 of admission	Probable hospital onset COVID-19
Day 10 of admission	Probable hospital onset COVID-19
Day 11 of admission	Probable hospital onset COVID-19
Day 12 of admission	Probable hospital onset COVID-19
Day 13 of admission	Probable hospital onset COVID-19
Day 14 of admission	Probable hospital onset COVID-19
Day 15 of admission and onwards to discharge	Definite hospital onset COVID-19
Post discharge	Community onset COVID-19

## Notes/Limitations

- Admission to NHS board was agreed as the appropriate point to start counting the duration of hospital stay to first positive specimen date, rather than the date of admission to a single hospital, since patients can be transferred between hospitals which would lead to restarting the clock to 'day 1' each time and therefore underestimating the number of nosocomial infections.
- Any discharges and re-admissions within the same health board which occur within the same calendar day will be classed as a continuous stay; the clock will not be restarted in these instances, only when a readmission occurs on the second day or more after any discharge.
- COVID-19 cases identified after discharge from hospital but within 14 days may be associated with the hospital. These cases, including those identified on readmission to hospital, are not included as hospital onset. This may result in under-reporting of COVID-19 cases associated with hospital care.
- It is acknowledged that patients can be transferred between NHS health boards and if transferred into a different health board during the same hospital stay, then the clock is restarted to 'day 1' which could lead to an underestimation of cases. However, the decision to restrict start date to admission to a single NHS health board represents the requirement to report at the health board-level.
- Any cases where the first positive samples are taken within Accident or Emergency specialties (A&E) prior to admission to hospital are not considered hospital onset COVID-19 cases.
- Non-Scottish patients whose records are available within the CDW are also considered. If the non-Scottish patient is coded as hospital onset, then they are included in reporting against the NHS board of admission/test. Any non-Scottish patients coded as community onset are excluded since they cannot be attributed to a Scottish NHS board of residence.
- Hospital onset COVID-19 cases are reported against the NHS board where the first sample was taken. Since the definition of hospital-onset COVID-19 was determined using date of admission to NHS board, the board assigned may not represent the board of attribution of hospital-onset COVID-19 infection (Table above).

## Updates to Hospital onset COVID-19 Methods and Reporting

- In December 2021, the case inclusion criteria was updated to include data feeds from private labs (in addition to NHS and UK Government labs) within the overall PHS COVID-19 dataset.
- On 5<sup>th</sup> January 2022, the case definition was updated to include LFDs in addition to PCR positives. Note that retrospective data was not updated and prior to 5<sup>th</sup> January 2022 data are still reported exclusively from PCR tests. LFDs are sourced from the self reporting portal and UK Gov. LFD positive cases that are followed by a negative PCR within 48 hours will be denotified.
- On 1<sup>st</sup> March 2022, Public Health Scotland updated the Scottish COVID-19 national case definition to include reinfections of COVID-19. Previously COVID-19 cases were based on an individual's first positive test result only. The new definition includes both first infections and possible reinfections. Possible reinfections are defined as individuals who test positive, by PCR (polymerase chain reaction) or LFD (lateral flow device), 90 days or more after their last positive test. Note that as per the change in definitions to include LFD tests as above, positive tests after 90 days from an LFD before the 5<sup>th</sup> January 2022 are not included as a reinfection.
- On 1<sup>st</sup> June 2022, ARHAI Scotland ceased reporting of Community onset COVID-19 alongside Hospital onset COVID-19, in line with the cessation of almost all population-based testing for SARS-CoV-2.
- On 26<sup>th</sup> October 2022, ARHAI Scotland ceased reporting of Non-hospital onset and Indeterminate hospital onset COVID-19 cases, in line with the cessation of the majority of routine asymptomatic testing in hospitals.

## Methods

### Data Extraction and Validation

COVID-19 case data are extracted by ARHAI on the Tuesday of each week prior to validation:

- **Case data source:** Source of data are Corporate Data Warehouse (CDW) that contains test results from Electronic Communication of Surveillance in Scotland (ECOSS) in addition to private laboratory data.

Case data are then linked to identify cases where admissions data are available:

- **Admissions Data Source:** Rapid Admission Preliminary Inpatient Data (RAPID) or Local Patient Admissions Systems.

RAPID is an unvalidated preliminary data source for admission data, and is known to be incomplete for some locations (primarily for non-acute/long term stay hospital settings). Therefore these records require to be validated by NHS boards against local patient admissions systems to ensure accuracy and completeness prior to calculation of hospital onset status. In addition to cases where admission data has been linked, COVID-19 records listed as “Hospital” within the “Specimen Origin” field (derived from the location of the request sent to the NHS laboratory) within CDW are also sent to NHS boards for validation to complete any admission dates which may be unavailable within RAPID.

Data from the corresponding reporting week are sent to Infection Control Managers (ICMs) and other nominated team members within Infection Prevention and Control teams within each NHS board to validate the list of potential hospital onset COVID-19 cases.

NHS boards have one week to validate their data and return validation sheets to ARHAI Scotland, whereby data are compiled and the hospital onset status is calculated. Please see the “List of Fields Collected” section below for details on the data items included in the validation process.

### Data Queries and Amendments Process

During the validation process, NHS boards are able to query any submitted results with local records, to ensure that in addition to admissions data, other details of the laboratory record including personal identifiers, specimen dates etc, are also correct.

ARHAI Scotland communicate regularly with PHS in order to investigate and amend any incorrect data as advised by NHS boards, so that CDW is as accurate as possible.

Due to this amendment process within ARHAI, and the constant feed of data from laboratories into the CDW (with new/retrospective records and amendments), COVID-19 data are live and may change on a regular basis. Any changes to retrospective data are tracked by ARHAI Scotland and how they may affect previously reported figures are detailed in the Hospital Onset COVID-19 report each week.

## List of Fields collected

### Surveillance Data Definitions

**Data item:** Row.names

**Response required:** N/A

**Definition:**

**Choices:**

**Rationale:** Provides numeric id number for case on validation sheet for highlighting queries with the data.

**Comments:**

-----  
**Data item:** CHI

**Response required:** Essential

**Definition:** Community Health Index number for patient identification

**Choices:**

**Rationale:** Part of unique record

**Comments:** Populated using ECOSS data, and do not need to be amended.

-----  
**Data item:** SpecimenDate

**Response required:** Essential

**Definition:** Collection date of first positive SARS-CoV-2 test

**Choices:** dd/mm/yyyy

**Rationale:** Part of unique record

**Comments:** Populated using ECOSS data, and do not need to be amended.

-----  
**Data item:** monthofspecimen

**Response required:** N/A

**Definition:**

**Choices:**

**Rationale:** Part of unique record

**Comments:** Populated using ECOSS data, and do not need to be amended.

---

**Data item:** ECOSSBoard  
**Response required:** Essential  
**Definition:** NHS Board where first positive SARS-CoV-2 test taken  
**Choices:** AA, BR, DG, FF, FV, GR, GGC, HG, LN, LO, GJ, OR, SH, TY, WI  
**Rationale:** Part of unique record  
**Comments:** Populated using ECOSS data, mapped from the location code of the sample, and does not need to be amended.

---

**Data item:** ECOSSHospitalofTest  
**Response required:** Essential  
**Definition:** Hospital where first positive SARS-CoV-2 test taken  
**Choices:**  
**Rationale:** Part of unique record  
**Comments:** Populated using ECOSS data, and do not need to be amended.

---

**Data item:** BoardofFirstPositiveTest  
**Response required:** Essential  
**Definition:**  
**Choices:** Multiple (see appendix 1)  
**Rationale:**  
**Comments:** Pre-populated using RAPID data if available. Check / amend / add / remove where appropriate.

---

**Data item:** AdmissionDatetoBoard  
**Response required:** Essential  
**Definition:** Date of Admission to NHS board associated with first positive SARS-CoV-2 test.  
**Choices:** dd/mm/yyyy  
**Rationale:** To describe admission associated with first positive SARS-CoV-2 test.  
**Comments:** Pre-populated using RAPID data if available. Check / amend / add / remove where appropriate. As this data is altered, the calculated hospital onset status on the validation sheet will update.

---

**Data item:** AdmissionDatetoHospofTest  
**Response required:** Essential  
**Definition:** Date of Admission to the hospital where first positive SARS-CoV-2 test was taken.  
**Choices:** dd/mm/yyyy  
**Rationale:** To describe admission associated with first positive SARS-CoV-2 test.  
**Comments:** Pre-populated using RAPID data if available. Check / amend / add / remove where appropriate. As this data is altered, the calculated hospital onset status on the validation sheet will update.

---

**Data item:** HospitalofFirstPositiveTest  
**Response required:** Essential  
**Definition:** Hospital where the first positive SARS-CoV-2 test was taken.  
**Choices:** Multiple (see appendix 1)  
**Rationale:** To describe admission associated with first positive SARS-CoV-2 test.  
**Comments:** Pre-populated using RAPID data if available. Check / amend / add / remove where appropriate.

---

**Data item:** Associated with cluster?  
**Response required:** Optional  
**Definition:** Case has been a part of a known COVID-19 hospital cluster.  
**Choices:** No  
Yes, [cluster ID]  
Yes, ID not listed  
**Rationale:** To identify any association with a COVID-19 hospital cluster.  
**Comments:**

---

**Data item:** Symptomatic or asymptomatic at time of test?  
**Response required:** Optional  
**Definition:** <https://publichealthscotland.scot/publications/covid-19-guidance-for-healthcare-settings-public-health-guidance/>  
**Choices:** Symptomatic, meets current case definition  
Symptomatic, clinical judgement  
Asymptomatic  
Unknown  
**Rationale:** To indicate if the patient was symptomatic or asymptomatic at time of their first positive test.  
**Comments:**

---

**Data item:** If Asymptomatic - Symptomatic 5 days after positive test?  
**Response required:** Optional  
**Definition:** <https://publichealthscotland.scot/publications/covid-19-guidance-for-healthcare-settings-public-health-guidance/>  
**Choices:** Yes, meets current case definition  
Yes, clinical judgement  
No  
Unknown  
**Rationale:** Completed for patients who were asymptomatic at time of their first positive test, to indicate if the patient was symptomatic 5 days after their first positive test.  
**Comments:**

---

**Data item:** RecordChecked  
**Response required:** Essential  
**Definition:**

**Choices:** Y / N  
**Rationale:** To identify that the case has been validated by the NHS board and that all data are correct.  
**Comments:** All cases are pre-populated as “N” initially for the NHS board to switch to Y when validated.

---

**Data item:** HAIOnsetStatus  
**Response required:** N/A  
**Definition:** See above  
**Choices:** Community Onset  
Non-Hospital Onset  
Indeterminate Hospital Onset  
Probable Hospital Onset  
Definite Hospital Onset  
**Rationale:** Displays Hospital onset category  
**Comments:** Calculated field to advise the NHS board on expected hospital onset status based on current data entered into ‘AdmissionDateToBoard’ field relative to “SpecimenDate”.

---

**Data item:** Missing data  
**Response required:** N/A  
**Definition:**  
**Choices:**  
**Rationale:** Highlights there may be missing data.  
**Comments:** Calculated field to advise NHS board/ARHAI of possible further information required.

---

## Reporting Process and Schedule

The Hospital Onset COVID-19 data are published 3-4 weeks in arrears, due to lag time in specimen results and RAPID data being available for the corresponding reporting week, and the time taken for validation by NHS boards.

Reports are pre-released each Monday corresponding to data 3 weeks prior, and publicly released each Wednesday on the NHS NSS website:

<https://www.nss.nhs.scot/antimicrobial-resistance-and-healthcare-associated-infection/data-and-intelligence/hospital-onset-covid-19/>

Typical timescales for an example report are outlined below:

<b>Monday</b>	<b>Tuesday</b>	<b>Wednesday</b>	<b>Thursday</b>	<b>Friday</b>	<b>Saturday</b>	<b>Sunday</b>
25 <sup>th</sup> Reporting Week	26 <sup>th</sup> Reporting Week	27 <sup>th</sup> Reporting Week	28 <sup>th</sup> Reporting Week	29 <sup>th</sup> Reporting Week	30 <sup>th</sup> Reporting Week	31 <sup>st</sup> Reporting Week
1 <sup>st</sup>	2 <sup>nd</sup>	3 <sup>rd</sup>	4 <sup>th</sup>	5 <sup>th</sup>	6 <sup>th</sup>	7 <sup>th</sup>
8 <sup>th</sup>	9 <sup>th</sup> Data from reporting week are extracted from CDW, linked with RAPID, validation sheets sent to NHS boards.	10 <sup>th</sup> NHS boards validation time	11 <sup>th</sup> NHS boards validation time	12 <sup>th</sup> NHS boards validation time	13 <sup>th</sup> NHS boards validation time	14 <sup>th</sup> NHS boards validation time
15 <sup>th</sup> NHS boards validation time	16 <sup>th</sup> Validation deadline	17 <sup>th</sup> ARHAI Scotland carry out final queries with NHS boards, compile data, analyse and compile report	18 <sup>th</sup> ARHAI Scotland compile data, analyse and compile report	19 <sup>th</sup> Report is completed and signed off by Consultant	20 <sup>th</sup>	21 <sup>st</sup>
22 <sup>nd</sup> Report is pre-released to list of stakeholders.	23 <sup>rd</sup>	24 <sup>th</sup> Report is published at 12noon	25 <sup>th</sup>	26 <sup>th</sup>	27 <sup>th</sup>	28 <sup>th</sup>

## Appendices

### Appendix 1 – Publication metadata

Hospitals included within hospital onset COVID-19 Surveillance:

NHS Board	Hospital
NHS Ayrshire and Arran (AA)	Ailsa Hospital
NHS Ayrshire and Arran (AA)	Arran War Memorial Hospital
NHS Ayrshire and Arran (AA)	Arrol Park Resource Centre
NHS Ayrshire and Arran (AA)	Ayrshire Central Hospital
NHS Ayrshire and Arran (AA)	Biggart Hospital
NHS Ayrshire and Arran (AA)	Brooksby Day Hospital
NHS Ayrshire and Arran (AA)	Community Hospital
NHS Ayrshire and Arran (AA)	Davidson Cottage Hospital
NHS Ayrshire and Arran (AA)	Girvan Community Hospital
NHS Ayrshire and Arran (AA)	Kirklandside Hospital
NHS Ayrshire and Arran (AA)	Lady Margaret Hospital
NHS Ayrshire and Arran (AA)	University Hospital Ayr
NHS Ayrshire and Arran (AA)	University Hospital Crosshouse
NHS Ayrshire and Arran (AA)	Woodland View
NHS Borders (BR)	Borders General Hospital
NHS Borders (BR)	Crumhaugh House
NHS Borders (BR)	Galavale House
NHS Borders (BR)	Hawick Community Hospital
NHS Borders (BR)	Hay Lodge Hospital
NHS Borders (BR)	Huntlyburn House
NHS Borders (BR)	Kelso Hospital
NHS Borders (BR)	Melburn Lodge
NHS Borders (BR)	The Knoll Hospital
NHS Dumfries and Galloway (DG)	Acorn House
NHS Dumfries and Galloway (DG)	Annan Hospital
NHS Dumfries and Galloway (DG)	Castle Douglas Community Hospital
NHS Dumfries and Galloway (DG)	Crichton Royal Hospital
NHS Dumfries and Galloway (DG)	Cromarty
NHS Dumfries and Galloway (DG)	Darataigh
NHS Dumfries and Galloway (DG)	Dumfries & Galloway Royal Infirmary
NHS Dumfries and Galloway (DG)	Galloway Community Hospital
NHS Dumfries and Galloway (DG)	Heather Lodge (CETU)
NHS Dumfries and Galloway (DG)	Innistaigh
