FOI Response: 3395

Date: 8 July 2026

Disclaimer: The information provided within this FOISA response is for management purposes only and is not published data. There are some data quality issues within the programme that are currently being investigated and therefore any data released as part of this FOI may be subject to change.

As advised the data reported is screening round length based on previous to current contact"(ie not the date of the next available screening appointment) for clients aged 53 to 70 and is not average time waited. The report does not include first time invites for those 50-53. Data is not available for the period from 1April 2016-31 March 2018. Data is provided for the financial years 2018 – 2026 only, broken down by screening centre and Scotland. Please note that the Scottish Breast Screening Programme was paused by Scottish Government in March 2020 with the Programme re-starting on a phased approach from July 2020. The capacity in the Programme was reduced to support prevention measures throughout the covid waves. As such the screening interval was extended and centres worked to increase capacity and reduce delays for the population.

	Percentage (%) of the total eligible population who, for each time period, have been offered invite or letter to arrange appointment for screening
